Introduction

The Dream Bikes Booking System is a simple command-line application designed to simulate the process of booking a bike from a fictional bike shop called "Dream Bikes." This program allows users to sign up, log in, browse different bike models, view their details, and proceed with booking and payment.

Features

- **User Registration and Login**:

- Users can sign up by providing their name, mobile number, and password.

- Registered users can log in using their credentials to access the bike booking features.

- **Bike Browsing and Selection**:

- Users can browse various bike models from top brands like Royal Enfield, Kawasaki, BMW, Hero, Honda, and Suzuki.

- Detailed information about each bike model, including price, engine capacity, mileage, fuel capacity, weight, and tire type, is available.

- **Booking and Payment**:

- Users can book a bike by providing their personal details such as name, phone number, and address.

- The system simulates a payment process where users can pay a down payment to book their selected bike.

- An invoice is generated and displayed upon successful booking and payment.

System Requirements

- Code Blocks Compiler: Required for compiling the C code.
- Operating System: Windows or Linux.
- Console Application Support: The application runs in a console environment.

System Design

- ## Structures

1. **Booking Order Struct**: Stores details of each order

```
1. {
2.     char name[50];
3.     long long int pho;
4.     char Add[30];
5.     char Model[30];
6. }b;
```

2. **Signup Struct**: Stores details of newly registered users

```
1. {
2.     char name[50];
3.     long long int pho;
4.     char pass[10];
5. }s;
```

3. **Login Struct**: Stores details of user login

```
1. {
2.     char name[50];
3.     char pass[10];
4. }l;
```

- ## Functions

S_password (): Securely captures the password during sign-up without displaying it on the screen.

L_password (): Securely captures the password during login without displaying it on the screen.

Invoice (): Generates and displays an invoice for the bike booking, also writes the invoice details to a file.

buyer_details (): Collects and displays the buyer's details required for booking.

Payment (): Simulates a payment process with a loading animation.

1. **Main Function**

   - Provides a menu for users to sign up, log in, or exit the program.
   - Implements the logic for user registration, authentication, bike selection, booking, and payment.

2. **Signup**

   - The user is prompted to enter their name, mobile number, and password.
   - The details are saved in a file for future login.

3. **Login**

   - The user is prompted to enter their name and password.
   - The credentials are verified against the stored details to grant access.

4. **Bike Selection**

   - After successful login, the user can browse various bike brands and models.
   - Detailed specifications and EMI options are provided for each model.

5. **Booking and Payment**

   - The user can proceed with booking by entering their personal details.
   - A simulated payment process is performed, and an invoice is generated and displayed.

Usage

- **User Signup**

  Step 1: Choose the "Signup" option from the main menu.
  Step 2: Enter a unique username.
  Step 3: Enter a secure password.
  Step 4: The system saves the credentials to users.csv and confirms successful signup.

- **User Login**

  Step 1: Choose the "Login" option from the main menu.
  Step 2: Enter your username.
  Step 3: Enter your password.
  Step 4: The system validates the credentials against users.csv. If valid, the user is logged in; otherwise, an error message is displayed.

- **Menu Navigation**

  Step 1: After login, choose the "Display menu and Order Bikes" option.
  Step 2: Select a category from the displayed list (Royal Enfield, Kawasaki, BMW,
     Hero, Honda, and Suzuki).
  Step 3: The system displays the Bikes in the selected category.

- **Bike Booking**

  Step 1: From the displayed menu, enter the Bike number to order.
  Step 2: Enter the category of the selected Bike.
  Step 3: Confirm if you want to order another Bike or complete the order.
  Step 4: After Ordering a bike pay the amount using display number.

- **Invoice from Dream Bikes**

  The invoice generation feature in the Dream Bikes Booking System serves to provide a detailed receipt of the transaction to the customer. It includes essential details such as customer information, bike model, and payment status. This feature helps in ensuring transparency and serves as proof of the transaction.

- **Buyer Details**

  Step 1: Enter the user's name.
  Step 2: Enter user's Mobile Number.
  Step 3: Enter Address of users.
  Step 4: These details are stored in invoice form.

- **Payment**

  The payment process is designed to simulate the payment of a down payment required to book a bike. It ensures that the customer goes through a realistic payment procedure, including a waiting period that mimics processing time. Upon successful payment, the system generates an invoice and confirms the booking.

Conclusion

The Dream Bikes Booking System is a comprehensive C-based application designed to facilitate the booking and purchasing process for bike enthusiasts. This project effectively integrates multiple functionalities, including user authentication, bike selection, buyer details collection, payment processing, and invoice generation

Future Enhancements

Implementing these future enhancements will significantly improve the functionality, user experience, and overall value of the Dream Bikes Booking System. By addressing these areas, the system can evolve into a more robust, user-friendly, and secure platform, meeting the needs and expectations of a diverse range of users.
